Attempt : 1 Total Mark : 10 Marks Obtained : 5

Section 1: Coding

### 1. Problem Statement

Milton is a diligent clerk at a school who has been assigned the task of managing class schedules. The school has various sections, and Milton needs to keep track of the class schedules for each section using a stack-based system.

He uses a program that allows him to push, pop, and display class schedules for each section. Milton's program uses a stack data structure, and each class schedule is represented as a character. Help him write a program using a linked list.

## **Input Format**

The input consists of integers corresponding to the operation that needs to be performed:

Choice 1: Push the character onto the stack. If the choice is 1, the following input is a space-separated character, representing the class schedule to be pushed onto the stack.

Choice 2: Pop class schedule from the stack

Choice 3: Display the class schedules in the stack.

Choice 4: Exit the program.

#### **Output Format**

The output displays messages according to the choice and the status of the stack:

- If the choice is 1, push the given class schedule to the stack and display the following: "Adding Section: [class schedule]"
- If the choice is 2, pop the class schedule from the stack and display the following: "Removing Section: [class schedule]"
- If the choice is 2, and if the stack is empty without any class schedules, print "Stack is empty. Cannot pop."
- If the choice is 3, print the class schedules in the stack in the following:
- "Enrolled Sections: " followed by the class schedules separated by space.
- If the choice is 3, and there are no class schedules in the stack, print "Stack is empty"
- If the choice is 4, exit the program and display the following: "Exiting the program"
  - If any other choice is entered, print "Invalid choice"

Refer to the sample output for the exact format.

## Sample Test Case

Input: 1 d

1 h

3

2.

```
247507057
                                                      24,150,1051
Output: Adding Section: d
Adding Section: h
Enrolled T
    Removing Section: h
    Enrolled Sections: d
    Exiting program
    Answer
    #include <stdio.h>
    #include <stdlib.h>
                                                                                 24,150,105,1
    struct Node {
    char data;
      struct Node* next;
    struct Node* top = NULL;
    void push(char value){
       struct Node* t=(struct Node*)malloc(sizeof(struct Node));
       t->data=value;
       t->next=NULL;
       printf("Adding Section: %c\n",value);
top==;
ret:
       if(top==NULL){
         return;
       t->next=top;
       top=t;
    }
```

```
void pop() {
    struct Node* t=top;
```
